(54) HYBRID MOBILE COMMUNICATION SYSTEM, HYBRID MOBILE COMMUNICATION EQUIPMENT AND HYBRID MOBILE COMMUNICATING METHOD

(57)Abstract:

PROBLEM TO BE SOLVED: To enable efficient information transfer in a mobile communication system with a hybrid configuration.

SOLUTION: A CSG (control channel) packet forming part 15 and an ASG (access channel) packet forming part 16 make information transmitted through a CSG and an ASG a packet, and a wideband radio base station destination address setting part 13 adds the address of a wideband radio base station. Also, a USG (user information) adds the address of a server in a server destination address setting part 12. The CSG, ASG and USG to which addresses are added are converted to transmission signals to a two-way radio base station by a PPP(point-to-point protocol) forming part 7, a PIAFS(PHS Internet access forum standard) forming part 8 and a PHS(personal handy phone system) forming part 9 and transmitted. The user information is directly transmitted to a server to

reduce useless traffic on a network.

LEGAL STATUS

[Date of request for examination] 26.03.2001

[Date of sending the examiner's decision of rejection] 23.03.2004

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
